

Operational Group to promote the production and use of "km 0" substrate in nurseries

Summary

We have created an operational group to develop the creation of a "km 0" substrate. This allows to have a circular economy in the nursery itself, to better control the raw material and even to create synergies with companies located close the nursery.

Objectives

The objectives are:

- Creation of a working group for the development of a substrate with local materials.
- Search for innovative elements and companies that can generate them.
- Carry out studies of the needs and potential of the nursery itself for the generation of this innovative substrate.
- Establish the key points that allow to evaluate the improvement.
- Build a "km0" substrate project proposal to be developed in the next years.

Conclusions

In conclusion, we believe that there is sufficient diversity of materials, both in the nursery itself and in the nearby companies, which will allow us to successfully develop an innovative substrate. This innovative product will allow to control the quality of the substrate, to obtain synergies with nearby companies, and will be more ecological.
