

# Restructuring quality-wood exploitation and classification process to achieve production diversification and to improve access to local markets

## Summary

This operational group has been created to find a demonstrative action to promote the minority species with great ecological value within the area ES5110011 of the Nature 2000 network.

At present, the use of the hardwood is limited to obtaining no added value products like firewood or biomass. This is the reason why the profitability of these forests is very limited

## Objectives

Improving the profitability of forestry-wood based products with diversification of the obtained products.

Consequently, the aim is to orient forestry towards obtaining quality products, participating in the distribution chain of local and specialized markets, establishing a more efficient distribution logistics process and extending time capture atmospheric carbon using wood in uses with a service life longer than bioenergy

## Conclusions

Drawing from the analysis performed, it has been agreed to work on the following demonstration:

- Making a playground with local wood and free of added chemicals.
- Implement new systems of wood classification as is done in other European countries.
- Articulate the various stakeholders throughout the supply chain
- Demonstrate that quality products can be manufactured with local wood
